

Power Your People
with Solutions
Tailored
for Oil and Gas

Joyn is Designed for You.
The Doer.
The Difference-Maker.

Organizations can now arm their people in the field to squeeze value out of every asset.

A lease operator can record volume information and well parameters; view theoretical production and make timely insights on potential performance gap.

The operator can even take action immediately to close the gap, and deliver more oil for the same cost.

Transform Data into Meaningful Insights and Shared Action.

Joyn is a new class of analytics and workflow software that equips your people with **out-of-the-box solutions** specific to oil and gas companies. With Joyn everyone from corporate to the field trusts their data, views the same information and takes action on **Production, CAPEX, OPEX, Reserves, Regulatory and Compliance.**

VERIFY LESS.
TRUST MORE.

Make Your Data Credible.

In hours, not weeks or months. Access exception reports and cross-reference data to create better quality.

SEARCH LESS.
FIND MORE.

Zero in on Exceptions.

Search with powerful google-like capabilities, and then drill down to the invoice.

HESITATE LESS.
ACT MORE.

Initiate Action Easily.

Create alerts and monitor progress on decisions such as over-budget AFE's, LOE, down wells and non-productive rigs.

REINVENT LESS.
SCALE MORE.

Respond Rapidly to Changes.

Build, view and manage configurable visualizations, dashboards and reports.

A Look Under the Hood

Ready for the Enterprise
